

AFSVision[®] Syndications

AFSVision Syndications supplies lending, servicing, trading, and administration automation to support Syndicated and Participated lending. Powered by AFSVision—the only straight-through processing model available on the market today—AFSVision Syndications capability provides the required servicing support to compete effectively in the Syndicated market as a lead agent or investor in other deals across all lines of business. AFSVision's ability to support all types of deals generates revenue and retains customers who have increased lending requirements.

AFSVision Syndications provides operational controls and efficiencies to manage and minimize operational risk in Capital Markets.

AFSVision Syndications supports deal origination, settlement, funding, and secondary market activities while simplifying the subsequent servicing, administration, accounting, and communication of a Syndicated or Participated credit. Automation of the Syndication process enables staff to handle greater volumes of deals while providing superior customer support.

Value

Risk Management

- Provides an integrated system with a straight-through process for Syndicated loans including secondary market trading
- Reduces errors and paperwork
- Simplifies the administration, accounting, and communication of a Syndicated or Participated credit

Cost Reduction

- Streamlines operations, thereby decreasing costs
